

PREFACE

On the well-known virtual community Stack Overflow, programmers can post and respond to queries about the development of software. It may be challenging for developers to locate the information they want on the platform because of the huge number of content accessible.

Every single one of us encounters errors of one kind or another while we are coding on frequently. Stack Overflow and other such websites are capable of assist with such a scenario. Coding and testing the code are the main aspects of our daily lives as software developers. In the event that we run across mistakes, we look them up on Google, Stack Overflow, etc., repair them, and repeat the process until our code is operating as we require.

In this research work, an innovative solution to the problem of searching for solutions on Stack Overflow using an auto search tool is presented.
